Does

Feels

A good infographic layout can convey information in seconds. Besides the fact that 90% of information transmitted to the brain is visual, the human brain can process images 60,000 times faster than text.

An infographic can be used illustrate a project's progress or help explain systems or application architecture for new employees.

If you want to share information that sticks, infographics are an excellent addition to your content marketing strategy. Studies have shown that people can still recall 65% of visual information after three days compared to retaining 10% of what they read.

Creating an effective infographic layout is easier when you know the type of infographic that suits your data best. Design tools such as Venngage or Piktochart offer templates to make the infographic design process faster and easier.
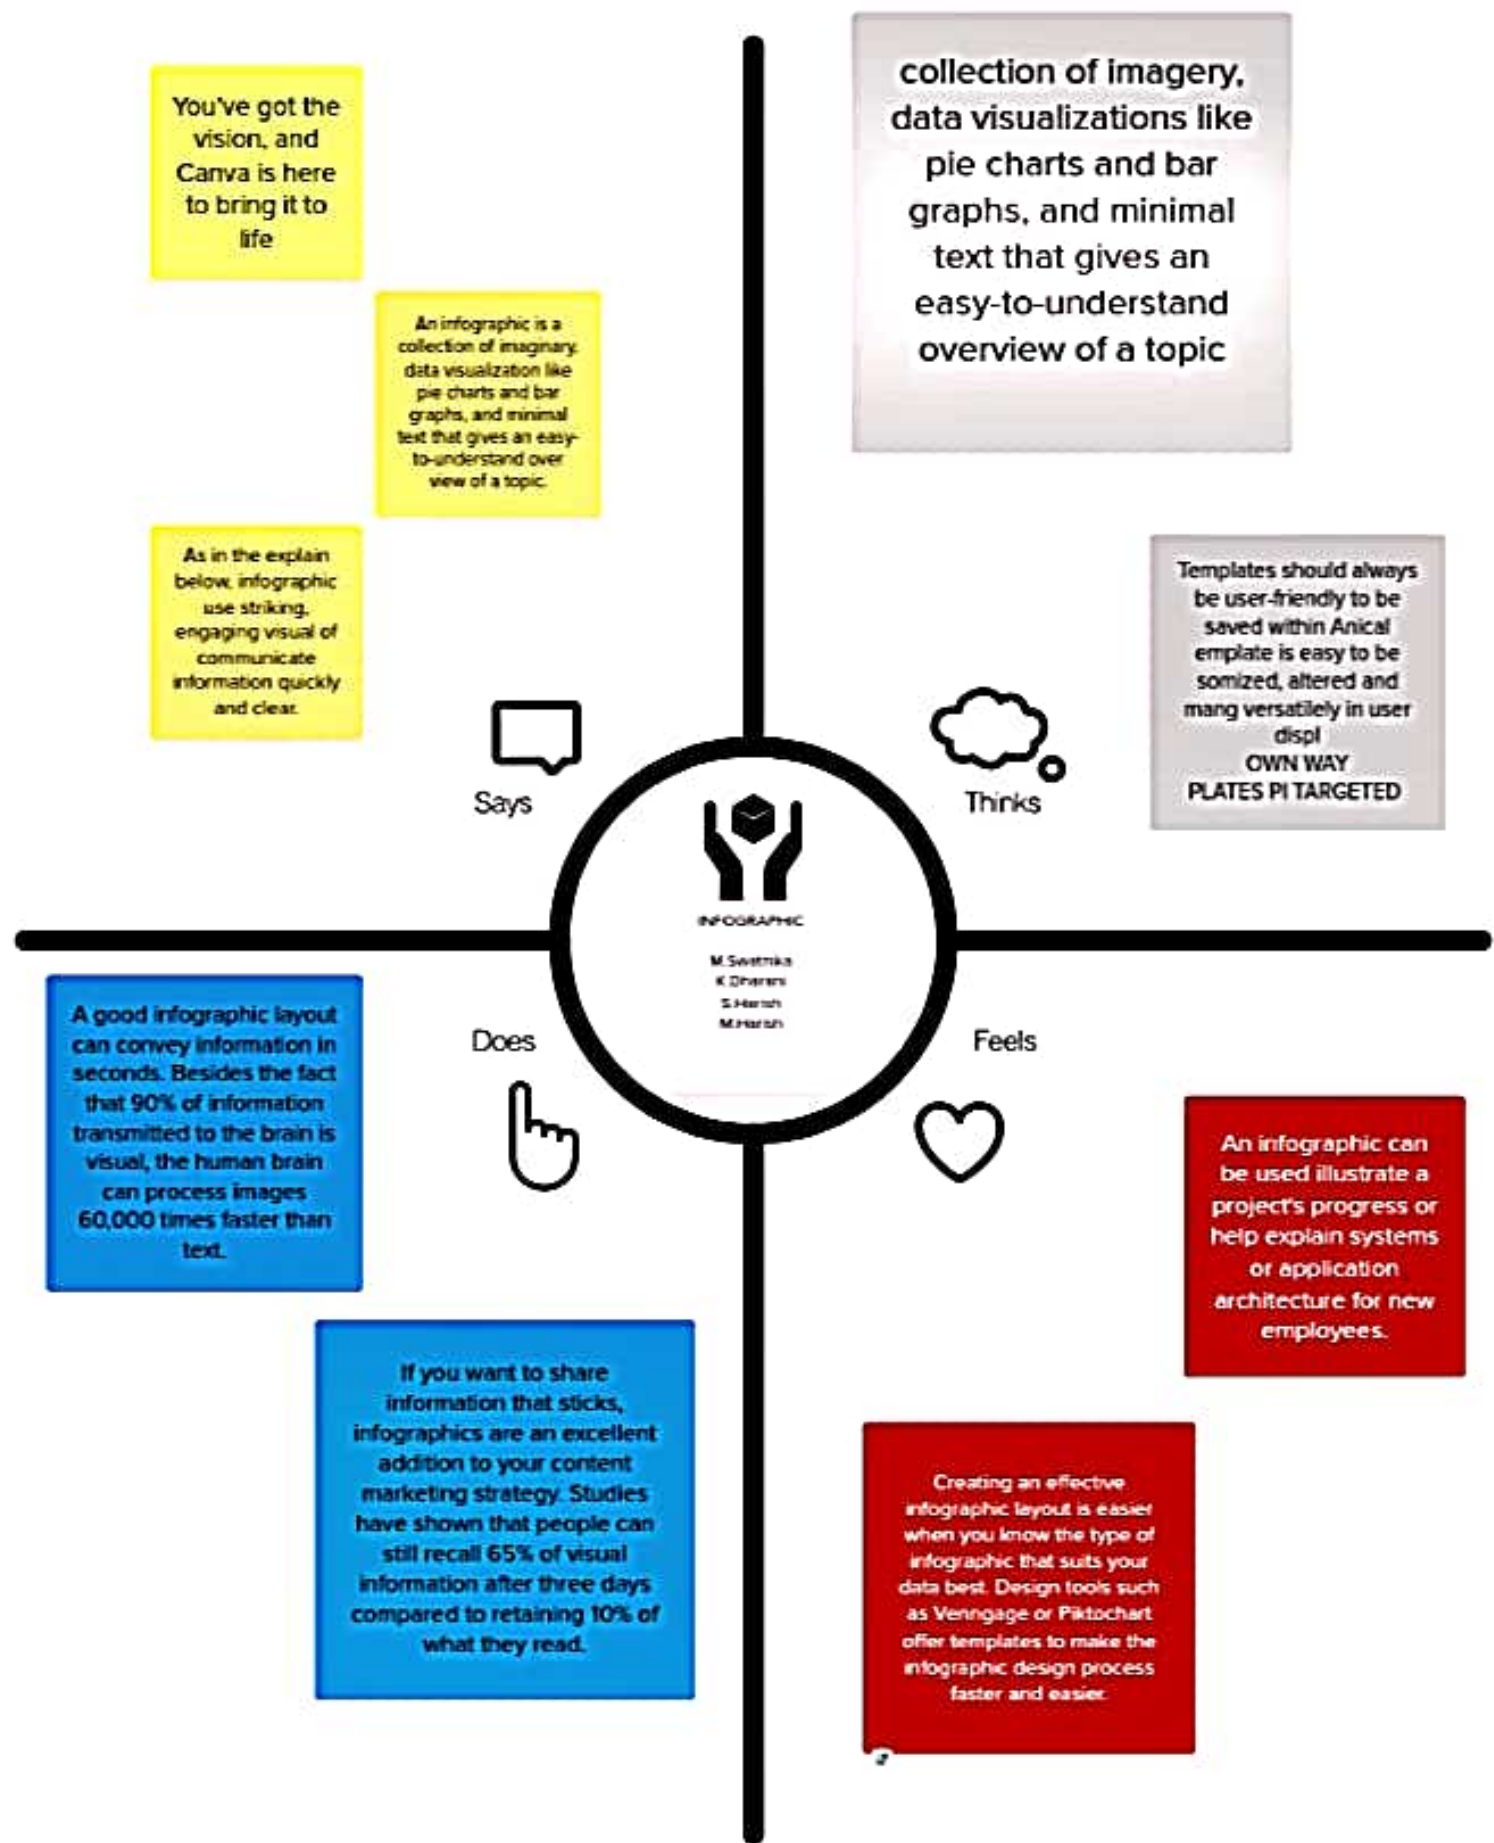

BRAINSTORMING ABOUT INFOGRAPHICS

REFERENCE

An infographic is defined as a visualization of data or ideas that tries to convey complex information to an audience in a manner than can be quickly consumed an easily understood.
